

Webstarter (Web Site Design Course)

Developed by the ECDL Foundation, ECDL WEBSTARTER is a new certification designed to give you the basic skills required to design and create a simple web site.

ECDL WEBSTARTER has been specifically designed for anyone who wants to acquire the skills to create a simple web site, without having to commit to the time and expense of a professional-level web design programme.

This makes ECDL WEBSTARTER an ideal certification for second-level students, small businesses, community groups and individuals who need to create personal web sites.

By explaining the basics and cutting through the jargon of web site design, ECDL WEBSTARTER gives you the skills you need to get started.

ECDL WEBSTARTER certifies that a Candidate:

- understands key web publishing concepts
- has the skills necessary to create a simple Web site
- understands some of the basic principles of HTML
- can perform simple coding tasks
- can use a web site editor to create Web pages, create forms and tables, use frames and format text
- can save and work with images on a web site
- can publish the site on the World Wide Web (WWW)
- has a good appreciation of security issues and law relating to web publishing

The ECDL WEBSTARTER certification requires approximately 20 hours of tuition followed by the successful completion of a simple 45-minute Test.

Benefits:

- designed for the student, home or small business Candidate
- simple, easy-to-follow programme progression

- explains the basic concepts behind web site design
- covers a variety of web publishing software
- a quality certification developed with input from international Subject Matter experts
- certifies best-practice in simple web site creation
- backed by the international reputation of the ECDL Foundation
